'Vision' Innovation

it's more than a lubricious hydrophilic coating

Lubri**MATR****X**TM

is a novel and innovative lubricious hydrophilic coating specifically developed to enable a safer, simpler and more effective intraocular lens (IOL) delivery. It is designed to provide the new standard for current and the next generation IOL injection systems.

Characteristics of Lubri**MATR****X**TM

Partnership Approach

AST partners with its customers from beginning to end. Our customers have complete access to AST's considerable technical expertise throughout the device design and development process. By working with customers every step of the way, small design changes can be made early in the process to prevent huge delays and overruns late in the game. Along with coating chemistries, a customized, easy-to-use process is developed under strict ISO 13485:2016 design control. Our partnership support does not end with the finalization of coating formulation or product design. We work with the customers to ensure smooth and trouble-free implementation at their facilities or at AST headquarters. To accelerate the approval of new designs, AST's experienced staff continues to provide assistance throughout the regulatory approval process and product introduction.
